Project Proposal Report

The proposed-solution report for FitBuddy is completed with the team, project, problem, solution, features, and resource details for the fitness and wellness application.

Project Initialization and Planning Phase

Field	Details
Date	01 October 2026
Team ID	SWTID-2026-7387
Team Name	FitBuddy
Project Title	FitBuddy – Smart Fitness and Wellness Management System
Maximum Marks	5 Marks
Project Type	Fitness and wellness management application

Project Proposal (Proposed Solution) Report

FitBuddy is a user-friendly fitness and wellness platform that helps users plan workouts, monitor daily activity, maintain healthy habits, and track progress in one place. The system aims to make fitness management simple, personalized, and measurable.

Project Overview

Objective: To provide a simple digital platform for users to manage workouts, fitness goals, daily activity, and wellness progress.

Scope: The project covers user profile management, personalized workout planning, activity tracking, goal setting, progress monitoring, reminders, and basic wellness guidance.

Problem Statement

Description: Many users find it difficult to consistently plan workouts, track fitness activities, monitor progress, and maintain healthy routines when information is spread across different applications or recorded manually.

Impact: A centralized fitness platform can reduce the effort required to manage routines, improve visibility of progress, encourage consistency, and help users stay focused on fitness goals.

Proposed Solution

Approach: Develop FitBuddy as an integrated fitness and wellness application that stores user goals and activity information and provides personalized workout plans, tracking, reminders, and progress insights.

Proposed Solution – Features and Resources

Key Functional Features

No.	Feature	Description
1	User Profile	Create and manage basic fitness profile, preferences, and goals.
2	Workout Planner	Create and follow personalized workout routines.
3	Exercise Library	View exercises with descriptions and workout guidance.
4	Activity Tracking	Record workouts, steps, duration, calories, and daily activity.
5	Goal Setting	Set fitness targets and monitor completion.
6	Progress Dashboard	View workout history and progress through summaries and charts.
7	Reminders	Provide reminders for scheduled workouts and healthy routines.
8	Wellness Tracking	Track basic wellness habits such as water intake and sleep records.

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Computing resources	Laptop/Desktop; minimum 8 GB RAM
Hardware	Storage	Minimum 256 GB available storage
Software	Programming	Python / JavaScript as required
Software	Frameworks	Flask or suitable web application framework
Software	Libraries	Pandas, NumPy, Matplotlib and other required libraries
Development Environment	IDE / Tools	VS Code / PyCharm; GitHub for version control
Database	Application data	SQLite / MySQL or suitable database
Data	Fitness information	User-entered workout, activity, goal and wellness records

Expected Outcome: A functional FitBuddy prototype that gives users a centralized way to plan workouts, record fitness activities, set goals, and monitor progress through a simple dashboard.
