Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
FitBuddy/
src/      - Application source code
components/ - Reusable UI components
assets/   - Images, icons and static assets
tests/    - Test files and test results
docs/     - Project documentation
config/   - Configuration files
README.md - Setup and run guide
package.json - Project dependencies / scripts
.env.example - Environment configuration template
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not hosted; intended for local evaluation
Login Credentials (Demo)	Demo credentials: Not provided / not required for local evaluation
Platform / Hosting Provider	Local development environment
Repository Link	Repository link: Not provided
Demo Video Link	Demo video link: Not provided

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

- Node.js and npm (or the project dependency manager specified in README)
- A modern web browser

Step 1: Open the FitBuddy project folder.

Step 2: Install the project dependencies using the dependency file provided.

Step 3: Create the environment file from .env.example, if required.

Step 4: Configure required local environment values.

Step 5: Start the application using the run command documented in README.md.

Step 6: Open the local application URL shown by the development server.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	No hosted URL is provided.	Run and evaluate the project locally.
2	Demo login credentials are not provided.	Use the project registration/local access flow if authentication is enabled.
3	Environment/API values may be required.	Configure the required values in .env before starting the application.
